

# 國立彰化師範大學 99 學年度博士班招生考試試題

系所：數學系

選考丙

科目：機率與統計

☆☆請在答案紙上作答☆☆

共 6 頁，第 1 頁

1.

- (1) (10%) For a sequence of random variable  $X_1, X_2, \dots, X_n$ , explain what is “Law of large number” and what is “Central limit theorem”. (you can describe the most general one you know)  
(2) (20%) Let  $X_1, X_2, \dots, X_n$  be i.i.d. random variables with the exponential density

$$f_\theta(x) = \frac{1}{\theta} e^{-x/\theta}, \quad x > 0.$$

Here,  $\theta > 0$  is unknown. We wish to estimate  $g(\theta) = e^{-2/\theta}$ . Consider two estimates

$$\delta_1 = g(\bar{X}_n), \text{ where } \bar{X}_n = \frac{1}{n} \sum_{i=1}^n X_i,$$

and

$$\delta_2 = \frac{1}{n} \sum_{i=1}^n I_{[X_i > 2]}, \text{ where } I_{[X_i > 2]} = \begin{cases} 1 & \text{if } X_i > 2 \\ 0 & \text{otherwise} \end{cases}$$

For  $i = 1, 2$  find  $\sigma_i^2$  so that

$$\sqrt{n}(\delta_i - g(\theta)) \xrightarrow{D} N(0, \sigma_i^2) \text{ as } n \rightarrow \infty.$$

2. 依據主計處最新公佈：全台有收入者中，「年收入破百萬」只有 8% 的人達成。中位數大約在台幣四十萬。

- (1) (10%) 假設有收入者之收入成常態分佈，年收入超過兩百萬的大概在前 X%，則 X 應該是遠大於 1，遠小於 1，或接近 1？（列出計算式）  
(2) (5%) 實際的統計是：領超過兩百萬的人是前 1%，大約有十二萬人。請據此判斷或評論台灣人收入之機率分配。

3. (20%) 為驗證新手術 (A) 是否較舊手術 (B) 更能延長心臟病患者的壽命，挑選 10 位狀況相似的病人，隨機均勻分成兩組，5 人接受 A，5 人接受 B，5 年後發現：

	alive	Dead	total
A	4	1	5
B	2	3	5
Total	6	4	10

在顯著水準 0.05 下，檢驗之。

共 6 頁，第 2 頁

4. A microcomputer manufacturer has developed a regression model relating his sales (Y in \$10,000s) with three independent variables. The three independent variables are price per unit (Price in \$100s), advertising (ADV in \$1,000s) and the number of product lines (Lines). Part of the regression results is shown below.

	Coefficient	Standard Error
Constant	1.0211	22.8752
Price	-0.1524	0.1411
ADV	0.8849	0.2886
Lines	-0.1463	1.5340

## Analysis of Variance

Source of Variation	Degrees of Freedom	Sum of Squares	Mean of Squares	F
Regression		2708.61		
Error (Residuals)	14	2840.51		
Total				

- (1) (2%) Use the above results and write the regression equation that can be used to predict sales.
- (2) (2%) If the manufacturer has 10 product lines, advertising of \$40,000, and the price per unit is \$3,000, what is your estimate of their sales? **Give your answer in dollars.**
- (3) (2%) Compute the coefficient of determination and fully interpret its meaning.
- (4) (4%) At  $\alpha = 0.05$ , test to see if there is a significant relationship between sales and unit price.
- (5) (4%) At  $\alpha = 0.05$ , test to see if there is a significant relationship between sales and the number of product lines.
- (6) (3%) Is the regression model significant? (Perform an F test.)
- (7) (2%) Fully interpret the meaning of the regression (coefficient of price) per unit that is, the slope for the price per unit.
- (8) (1%) What has been the sample size for this analysis?
5. (15%) 舉一例，具體描述「機率」或「統計」在解決一些實際問題上的應用，以及此應用產生之效益。
